Kepada: Sjafaraenan Sjafaraenan &lt;enan.gidinnur@gmail.com&gt;

Sjafaraenan Sjafaraenan:

Thank you for submitting the manuscript, "A Study of Nutritional Potential of Semele Sp. Shellfish on Estrogen Levels and Follicle Stimulating Hormone Receptor Genes in Perimenopausal Women" to Biodiversitas Journal of Biological Diversity. With the online journal management system that we are using, you will be able to track its progress through the editorial process by logging in to the journal web site:

Submission URL: <https://smujo.id/biodiv/authorDashboard/submission/9702>

Username: sjafaraenan

If you have any questions, please contact me. Thank you for considering this journal as a venue for your work.

Ahmad Dwi Setyawan

Kepada: Sjafaraenan Sjafaraenan &lt;enan.gidinnur@gmail.com&gt;

Sjafaraenan Sjafaraenan:

We have reached a decision regarding your submission to Biodiversitas Journal of Biological Diversity, "A Study of Nutritional Potential of Semele Sp. Shellfish on Estrogen Levels and Follicle Stimulating Hormone Receptor Genes in Perimenopausal Women".

Our decision is: Revisions Required

-----  
Reviewer A:

Dear Author,

Thank you for submitting this interesting study investigating the effects of Semele on estrogen levels and FSHR. The paper clearly has a lot of value for those who are pre menopausal and live in coastal communities. There is a lot of potential for this study, but there is also a responsibility to ensure that the conclusions are as clear as possible. Overall, the pre and post study design is relatively good, though there are some potential confounding factors.

There are some revisions required in order to consider this manuscript for publication. I have included specific feedback on the word document version of the manuscript, please find attached. Additionally, please consider the following key areas when making revisions:

1. Clarity on the tests run. Sometimes in the methods and discussion, it is not clear whether you are discussing the blood results or the Semele nutrient analysis. Please make sure that this is clear throughout the paper, as some readers may be confused and may draw false conclusions.
2. Paired t test. The t test should only be run on normally distributed data - please state in the manuscript whether data were tested for normally distributed. If the data are not normally distributed, the t test should not be used - use a non-parametric test instead (such as the Wilcoxon).
3. Extraneous variables. Did you check whether the women were on any other medication at the time? This could influence the results? Please ensure this is covered in the methods.

With these changes, the manuscript should be in a better position overall for consideration.

Recommendation: Revisions Required

Yth: Managing editor Jurnal Biodiversitas

Terima Kasih kami ucapkan atas terpublishnya Tulisan Kami, Nutritional potential of *Semele* sp. shellfish on estrogen levels and follicle-stimulating hormone receptor genes in perimenopausal women. Volume 23, Number 3, March 2022. Pages 1196-1203. (9702Article Text 57802)

Mohon maaf apakah bisa direvisi pada bagian author sebab ada yang berbahasa Indonesia yaitu Point 4

Tertulis: Sekolah Tinggi Ilmu Farmasi Makassar Jl. Perintis Kemerdekaan Km 13, Makassar 90242, South Sulawesi, Indonesia

Seharusnya : Makassar College of Pharmacy, Jl. Perintis Kemerdekaan Km 13, Makassar 90242, South Sulawesi, Indonesia.

Kami mohon dengan sangat bantuannya, sebelumnya kami ucapkan terima kasih

Hormat Kami

Sjafaraenan
