Pediatric Gastroenterology, Hepatology & Nutrition

Dear Dr. Febriani,

Reviewers have now commented on your paper. You will see that they are advising that you revise your manuscript. If you are prepared to undertake the work required, I would be pleased to reconsider my decision.

For your guidance, reviewers' comments are appended below.

If you decide to revise the work, please submit a list of changes or a rebuttal against each point which is being raised when you submit the revised manuscript.

Your revision is due by Feb 09, 2020.

To submit a revision, go to <https://www.editorialmanager.com/pghn/> and log in as an Author. You will see a menu item call Submission Needing Revision. You will find your submission record there.

Yours sincerely,

Ki Soo Kang, M.D., Ph.D.
Editor-in-Chief
Pediatric Gastroenterology, Hepatology & Nutrition

Comments from the Editors and Reviewers:

Editor: If those were present, please describe underlying diseases in Stunting and Non-stunting group.

Reviewer 1: (1) Please describe the full terms of abbreviations "IW" and "L/A Z score" in parentheses.

(2) Please write this paper in a unified terms.

For example, you can use "6-60 months" rather than "6 months - 5years".

you can express "control" rather than "non-stunting"

(Likewise, please express the terms of the table in one unified way.)

(3) In the last paragraph,

I recommend that the number of vitamins be marked as the subscript.

What is Arabic number 25 after the sentence that quoted Hidayati et al. research?

Display the unit of measurement when referring to the ferritin results.

(4) In all the tables

Please check and fill out the footnotes format when you write the table. (Footnotes should be expressed in the order of *, †, ‡, §, ||, ¶, **.)

Please display the measurement units of each item, or write it as footnote at the bottom of the table.

Do not record the mean and standard deviation separately, but recommend expressing it in the same format as $M \pm SD$ in one line.

I recommend that you display the statistical method and the difference of significance at the footnotes, separately.

If possible, you are good to describe the statistical methods at the chapter "Data Analysis".

Make sure you check dot and comma when you display data in the table 2.

(5) The limitations of this study may be that he did not reflect the intake, but only analyzed and compared the levels of nutrients in the blood. What do you think of this?

Comments from the Editors and Reviewers:

Editor: Please make a response of author for reviewers' comments which include answers matching to each point of comments.

Reviewer 1: Please correct typo

(ex) ① Result of Abstract - first line

· The highest proportion of stunting was 12-36month of age
⇒ ~ 12-36months ~

② Material and Methods - Eighth line

· Score -2 standard deviation - +2 deviation standard based ~
⇒ ~ +2 standard deviation ~

③ Table

· Mean (SD) ⇒ Mean ± SD

· How about writing the age interval in Table 1 as "6-11 / 12-35 / 36-60"?

· I recommend that you record the same number of effective numbers below decimal points according to the unit of measurement.

· Check the data in Table 2. The stunting group results do not appear to be in the correct cells.

In the discussion,

① You mention that "The risk of developing stunting was higher in children age 24-59 months than 0-23 months (50% and 24%, respectively)".

Is this the result of this study?

⇒ If you quote another study, please mark it properly.

Otherwise, If this is the result of this study, where are the data for this age listed in the results table?

② You mention, "This study found more girls than boys with the same % in both stunting and control group". But girls are 47.5% and boys are 52.5%, which is more boys than girls. Am I misunderstanding?

Reviewer 3: Comments:

1. There are many grammatical mistakes (highlighted in red) in the manuscript.

2. Table 2 has not been denoted in the results section.

3. Level of significance is not being described in the text.

4. Tables are not self explanatory.

5. What does *** mean in the table????

6. OR for birth weight is given but where is the OR for other risk factors in Table 2. Text in table 2 is not similar to what is being shown in Table 2 which is not even described in text.

7. Errors are highlighted in red colour. Table for logistic regression is absent as being described in text.

The quality of the manuscript needs to be improved to increase clarity. The grammar of the manuscript should also be revised.

There is additional documentation related to this decision letter. To access the file(s), please click the link below. You may also login to the system and click the 'View Attachments' link in the Action column.
