content, microstructure, and moisture content of potassium caseinate prepared by drying-methods (freeze dryer, oven) and acidic strength (hydrochloric acid and acetic acid).

What this study adds:

- Oven-drying combined with either hydrochloric acid or acetic acid enhanced antioxidant activity, a* score (reddish), and b* (yellowish).
- Treatment of freezing-drying with hydrochloric acid or acetic acid alleviated moisture content, but improved viscosity and microstructural properties.
- Combination of oven-drying and hydrochloric acid as strong acid was responsible for increase in L* (lightness) and content of protein and dissolved protein, as well as promoted changes in chemical features by FTIR analysis.
